## 1 Technology Components and Pre-requisites

- BMC Remedy Action Request Server v9.0
- BMC Remedy Plug-in server v9.0 (Pre-installed with AR Server)
- Java 1.8
- MS SQL Server 2008
- Tomcat 7.0.53
- BMC ITSM Incident Management

## 2 Architectural Overview and Solution approach

AR System clients perform external data source operations through the AR System server, plug-in service, and plug-in APIs. The plug-in service extends the AR System server to integrate with external data sources (data not contained in the BMC Remedy AR System database). Current implementation is done using BMC Remedy AR System Filter (AR Filter) API plug-in and Remedy API.

Device42 Remedy connector is initiated through filter plug-in API on modification of the configuration record either manually or through escalation. The connector uses the json client to fetch data from the Device42 API and pushes it into ARServer. Once the data is available in the AR Server, the CI data is available for relating to Incidents. One CI can be related to multiple Incidents and One Incident can have multiple CIs.

## 3 Deployment steps

### 3.1 BMC Remedy definition files to import

- Login to BMC Remedy Developer Studio as BMC Remedy Admin (Developer)
- First import “Device42\_Forms.def” file
- Import “Device42\_IncidentTemplateForm.def” file, This file contains field details needs to be created in OOB HPD:Help Desk form
- Create all the fields in HPD:Help Desk form by referring the Incident Template form
- Import rest of the workflow definition files in the order as below –
  - Device42\_ALs.def

After importing the Active Links, update the below Active links as described below –

Active Link Name - Device42:CIs-OnUpdateOpenD42URL\_\_c

Action -

PERFORM-ACTION-OPEN-URL new

[http://<hostname>:<port>/<path>/\\$ObjectType\\_chr\\_c/\\$ID\\_int\\_c\\$](http://<hostname>:<port>/<path>/$ObjectType_chr_c/$ID_int_c$)

Update the url with appropriate hostname, port and path (Do not modify field reference in the url)

Active Link Name - Device42:HelpDeskOpenD42URLFromTableData\_\_c

PERFORM-ACTION-OPEN-URL new

[http://<hostname>:<port>/<path>/\\$ObjectTypeAssoc\\_col\\$/SIDAssoc\\_col\\$](http://<hostname>:<port>/<path>/$ObjectTypeAssoc_col$/SIDAssoc_col$)

Update the url with appropriate hostname, port and path (Do not modify field reference in the url)

- Device42\_AL\_Guide.def
  - Device42\_Filters.def
  - Device42\_Escalations.def
  - Device42\_Char\_Menu.def
- Attaching the Character Menu -  
After Importing the “Device42\_Char\_Menu.def”, Open HPD:Help Desk form goto “Device42” Panel -> ObjectType field -> Attach this Char Menu

### 3.2 BMC Remedy – Device42 Base configuration

Open “Device42:BaseConfigurations” form in Browser as Admin and create a Record as in “BaseConfigurations.xlsx”

Please note to update Device42 User credentials and Remedy user credentials accordingly

**DEVICE42****Base Configurations**

|                    |                             |                  |                                      |                 |       |
|--------------------|-----------------------------|------------------|--------------------------------------|-----------------|-------|
| Base URL           | http://                     | Device Field Ids | 800001001,800001002,800001003,8      | Operation       | None  |
| User Name          | admin                       | Rack Field Ids   | 800001001,800001002,800001003,8      | Remedy User     | Demo  |
| Password           | *****                       | PDU Field Ids    | 800001001,800001002,800001003,8      | Remedy Password | ***** |
| Limit              | 100                         | Part Field Ids   | 800001001,800001015,800001003,8      |                 |       |
| Object Types       | devices, racks, pdus, parts | Sync Log         | Last Update from API for Operation S |                 |       |
| Target Schema      | Device42:CIs                |                  |                                      |                 |       |
| D42 Last Sync Date | 5/31/2016 12:30:16 PM       |                  |                                      |                 |       |

```

Server-Plugin-Alias: NextId NextId Remedywin.d42sus.pvt:9999
Server-Plugin-Alias: REMEDY.ARF.CBDATA REMEDY.ARF.CBDATA Remedywin.d42sus.pvt:9999

Disable-ARSignals: F
Plugin: arnativesignal90_build001.dll
Plugin: ardbccconf.dll

```

### 3.3 Install plug-in files

*The following steps are typically for a Windows server. However the same steps may work for Linux server too. Care needs to be taken to update relevant paths for Linux.*

- Copy the d42fa.zip under <AR\_INSTALL\_DIR>\pluginsvr directory.
- For ex – Place the zip file under C:\Program Files\BMC Software\ARSystem\pluginsvr
- Unzip the d42fa.zip file, a new directory d42fa is created with following lib files
  - commons-codec-1.9.jar
  - commons-logging-1.2.jar
  - d42fa.jar
  - httpclient-4.4.1.jar
  - httpcore-4.4.1.jar
  - jettison-1.3.7.jar
  - stax-api-1.0.1.jar

### 3.4 Configure plug-ins within BMC remedy

The following configuration needs to be done to include the plug-in within BMC.

- Update the following line at the end of list of plugins within ar.conf/ar.cfg under AR\_INSTALL\_DIR>\Conf directory

*Server-Plugin-Alias: DEVICE42.RESTAPI.PLUGIN DEVICE42.RESTAPI.PLUGIN <RemedyServer>:9999*

```

Server-Plugin-Alias: NextId NextId Remedywin.d42sus.pvt:9999
Server-Plugin-Alias: REMEDY.ARF.CBDATA REMEDY.ARF.CBDATA Remedywin.d42sus.pvt:9999
Server-Plugin-Alias: RMDY.ITSM.RLE RMDY.ITSM.RLE Remedywin.d42sus.pvt:9999
Server-Plugin-Alias: ARSYS.ALRT.TWITTER ARSYS.ALRT.TWITTER Remedywin.d42sus.pvt:9999
Server-Plugin-Alias: ARSYS.ARF.QUERYPARSER ARSYS.ARF.QUERYPARSER Remedywin.d42sus.pvt:9999
Server-Plugin-Alias: ARSYS.ARF.TWITTER ARSYS.ARF.TWITTER Remedywin.d42sus.pvt:9999
Server-Plugin-Alias: DSO.FILTERCONFIGURATION DSO.FILTERCONFIGURATION Remedywin.d42sus.pvt:9999
Server-Plugin-Alias: APL.ARDBC.RESTFULARDBCPLUGIN APL.ARDBC.RESTFULARDBCPLUGIN Remedywin:9556
Server-Plugin-Alias: DEVICE42.RESTAPI.PLUGIN DEVICE42.RESTAPI.PLUGIN Remedywin.d42sus.pvt:9999
Disable-ARSignals: F
Plugin: arnativesignal90_build001.dll
Plugin: ardbccconf.dll

```

- Add the following lines in pluginsvr\_config.xml under <AR\_INSTALL\_DIR>\ pluginsvr directory. Add the lines within <pluginset> tag at the end

```

<plugin>
<name>DEVICE42.RESTAPI.PLUGIN</name>
<classname>com.device42.bmc.integration.Device42BMCFilter</classname>
<filename> <AR_INSTALL_DIR>\pluginsvr\d42fa\d42fa.jar</filename>
<pathelement type="location"><AR_INSTALL_DIR>\pluginsvr\d42fa\d42fa.jar</pathelement>
<pathelement type="location"><AR_INSTALL_DIR>\pluginsvr\d42fa\httpclient-4.4.1.jar</pathelement>
<pathelement type="location"><AR_INSTALL_DIR>\pluginsvr\d42fa\httpcore-4.4.1.jar</pathelement>
<pathelement type="location"><AR_INSTALL_DIR>\pluginsvr\d42fa\jettison-1.3.7.jar</pathelement>
<pathelement type="location"><AR_INSTALL_DIR>\pluginsvr\d42fa\stax-api-1.0.1.jar</pathelement>

```

</plugin>

- BMC Remedy AR Server needs to be restarted to recognize and load the new plug-in.

```

<pathelement type="location">C:/Program Files/BMC Software/ARSystem/pluginsvr/d42fa/jettison-1.3.7.jar</pathelement>
<pathelement type="location">C:/Program Files/BMC Software/ARSystem/pluginsvr/d42fa/stax-api-1.0.1.jar</pathelement>
</plugin>
<pluginset>
<pluginset name="PluginSet_1">
<pathelement type="location">C:/Program Files/BMC Software/ARSystem/pluginsvr/arreport90_build001.jar</pathelement>
<pathelement type="location">C:/Program Files/BMC Software/ARSystem/pluginsvr/arreportingapi90_build001.jar</pathelement>
</pluginset>
</pluginset>
</plugins>
</pluginsvr_config>
```

- The integration requires a fixed license user to fetch and update records. This needs to be configured in the Base configuration form

## 4 Usage

### 4.1 Manual Synchronization

Base configuration form allows to manually trigger the synchronization. The sync process is split into 2 steps for optimal performance. Both these processes need to be executed one after the other.

- Sync – where New CIs on device42 server are newly created and updated attributes of other existing CIs are synced.

This can be executed by selecting Operation = “Sync” and modifying the record.

The screenshot shows the 'Base Configurations' form for DEVICE42. The 'Operation' dropdown menu is set to 'Sync' and is highlighted with a green box. Other fields include Base URL, User Name (admin), Password, Limit (100), Object Types (devices, racks, pdus, parts), Target Schema (Device42-CIs), and D42 Last Sync Date (5/30/2016 3:21:59 PM). The 'Device Field Ids', 'Rack Field Ids', 'PDU Field Ids', and 'Part Field Ids' are all set to '800001001,800001002,800001003,8'. The 'Sync Log' is set to 'Last Update from API for Operation C'.

- Mark for Delete – where missing ids or deleted CIs in the Device42 server are identified and marked for delete into Remedy AR System.

This can be executed by selecting Operation = “Delete” and modifying the record.

The screenshot shows the 'Base Configurations' form for DEVICE42. The 'Operation' dropdown menu is set to 'Delete'. Other fields are the same as in the previous screenshot, including Base URL, User Name (admin), Password, Limit (100), Object Types (devices, racks, pdus, parts), Target Schema (Device42-CIs), and D42 Last Sync Date (5/30/2016 3:21:59 PM). The 'Device Field Ids', 'Rack Field Ids', 'PDU Field Ids', and 'Part Field Ids' are all set to '800001001,800001002,800001003,8'. The 'Sync Log' is set to 'Last Update from API for Operation C'.

## 4.2 Automatic Synchronization through remedy escalation

Automatic synchronization is achieved by automating the above 2 steps using Remedy Escalations.

## 4.3 Enabling detailed logging

The connector uses log4j logging mechanism to log the transaction. To enable detailed logging configure priority value to **info** from **warn** in log4j\_pluginsvr.xml under <AR\_INSTALL\_DIR>\pluginsvr

The snapshot of the log shown below:

```
</logger>
<logger additivity="true" name="com.bmc.itsm.arl">
  <level value="info"/>
</logger>
<logger additivity="false" name="com.bmc.itsm.rle">
  <level value="warn"/>
  <appender-ref ref="SWLMLog"/>
</logger>
<logger additivity="false" name="com.bmc.itsm.rleconfig">
  <level value="warn"/>
  <appender-ref ref="SWLMLog"/>
</logger>
<root>
  <priority value="info"/>
  <appender-ref ref="PluginLog"/>
</root>
</log4j:configuration>

```

## 4.4 Selective Synchronization

During manual synchronization, the user can select the item category to selectively synchronize the items.

To synchronize all the object types, the content should be “devices, racks, pdus, parts” (excluding the quotes). If selected items need to be synched then the values can be changed as “devices, parts” or “devices”.

## 4.5 Internal Parameters

Some of the fields are for internal use only. These fields should not be modified unless there is a need to do so. These are Device Field Ids, Rack Field Ids, PDU Field Ids and Part Field Ids

## 4.6 Integrate with Incident forms

Below image shows HPD:Help Desk integrated with Device42 panel to display list of Device42 CIs and CIs associated to an incident

Description

## 5 Web Service - Get list of Incidents associated to Device42 CI

Webservice has been published in Remedy server to get list of incidents associated to the Device42 CI. Webservice consuming application has to pass valid device type and device id value to get the Incident Ids

### 5.1 XML Definition is as follows -

<http://10.10.255.107:8080/arsys/WSDL/public/Remedywin/Device42:GetListofIncidentsAssociatedtoCIs>

```
<wsdl:definitions xmlns:s0="urn:Device42:GetListofIncidentsAssociatedtoCIs"
  xmlns:soap="http://schemas.xmlsoap.org/wsdl/soap/" xmlns:soapenc="http://schemas.xmlsoap.org/soap/encoding/" xmlns:wsdl="http://schemas.xmlsoap.org/wsdl/" xmlns:xsd="http://www.w3.org/2001/XMLSchema" targetNamespace="urn:Device42:GetListofIncidentsAssociatedtoCIs">
  <wsdl:types>
    <xsd:schema elementFormDefault="qualified" targetNamespace="urn:Device42:GetListofIncidentsAssociatedtoCIs">
      <xsd:element name="GetIncidentList" type="s0:InputMapping5"/>
      <xsd:complexType name="InputMapping5">
        <xsd:sequence>
          <xsd:element name="DeviceType" type="xsd:string"/>
          <xsd:element name="DeviceID" type="xsd:string"/>
        </xsd:sequence>
      </xsd:complexType>
      <xsd:element name="GetIncidentListResponse" type="s0:OutputMapping5"/>
      <xsd:complexType name="OutputMapping5">
        <xsd:sequence>
          <xsd:element maxOccurs="unbounded" name="getListValues">
            <xsd:complexType>
              <xsd:sequence>
                <xsd:element minOccurs="0" name="RelatedIncidents" type="xsd:string"/>
              </xsd:sequence>
            </xsd:complexType>
          </xsd:element>
        </xsd:sequence>
      </xsd:complexType>
      <xsd:element name="AuthenticationInfo" type="s0:AuthenticationInfo"/>
      <xsd:complexType name="AuthenticationInfo">
        <xsd:sequence>
          <xsd:element name="userName" type="xsd:string"/>
          <xsd:element name="password" type="xsd:string"/>
          <xsd:element minOccurs="0" name="authentication" type="xsd:string"/>
          <xsd:element minOccurs="0" name="locale" type="xsd:string"/>
          <xsd:element minOccurs="0" name="timeZone" type="xsd:string"/>
        </xsd:sequence>
      </xsd:complexType>
    </xsd:schema>
  </wsdl:types>
  <wsdl:message name="GetIncidentListSoapOut">
    <wsdl:part element="s0:GetIncidentListResponse" name="parameters"></wsdl:part>
  </wsdl:message>
  <wsdl:message name="ARAuthenticate">
```

```

<wsdl:part element="s0:AuthenticationInfo" name="parameters"></wsdl:part>
</wsdl:message>
<wsdl:message name="GetIncidentListSoapIn">
<wsdl:part element="s0:GetIncidentList" name="parameters"></wsdl:part>
</wsdl:message>
<wsdl:portType name="Device42_PortPortType">
<wsdl:operation name="GetIncidentList">
<wsdl:input message="s0:GetIncidentListSoapIn"></wsdl:input>
<wsdl:output message="s0:GetIncidentListSoapOut"></wsdl:output>
</wsdl:operation>
</wsdl:portType>
<wsdl:binding name="Device42_PortSoapBinding" type="s0:Device42_PortPortType">
<soap:binding style="document" transport="http://schemas.xmlsoap.org/soap/http"/>
<wsdl:operation name="GetIncidentList">
<soap:operation soapAction="urn:Device42:GetListofIncidentsAssociatedtoCIs/GetIncidentList" style="document"/>
<wsdl:input>
<soap:header message="s0:ARAuthenticate" part="parameters" use="literal"></soap:header>
<soap:body use="literal"/>
</wsdl:input>
<wsdl:output>
<soap:body use="literal"/>
</wsdl:output>
</wsdl:operation>
</wsdl:binding>
<wsdl:service name="Device42:GetListofIncidentsAssociatedtoCIsService">
<wsdl:documentation>
Webservice to get list of Incidents associated to Device42 CIs
</wsdl:documentation>
<wsdl:port binding="s0:Device42_PortSoapBinding" name="Device42_PortSoap">
<soap:address location="http://remedywin:8080/arsys/services/ARService?server=remedywin&webService=Device42:GetListofIncidentsAssociatedtoCIs"/>
</wsdl:port>
</wsdl:service>
</wsdl:definitions>

```

Webservice can be consumed by calling the below link -

<http://10.10.255.107:8080/arsys/WSDL/public/Remedywin/Device42:GetListofIncidentsAssociatedtoCIs>

<http://<BMC Remedy Midtier server>/arsys/WSDL/public/<BMC Remedy AR Server>/Device42:GetListofIncidentsAssociatedtoCIs>

Below screenshot gives an example –

In Soap UI, Device Type = device and Device ID = 15 has been passed  
Output – List of Incidents have been Returned

INC000000000209; INC000000000216; INC000000000604

Request 1
